

Comments on the book

"The editors and contributors have written a history, not only of the O&G Society of Singapore but also the development of O&G in Singapore. By doing so, they also have recorded the history of health care, medical education and the development of O&G through the years. I found it thrilling and could hardly put it down, as if it was a detective story. Indeed all aspects of the book – history, people, review articles and photos – are well recorded and written, and it must be preserved for posterity."

Dr Lawrence Chan
Retired O&G Practitioner,
Former Master of Academy of Medicine, Singapore and
Former Chairman Medical Board, Kangang Kerbau Hospital

"Critics who charge that Singapore is bereft of original thought and innovation will be silenced by this book that chronicles the history of obstetrics and gynaecology in the country. Through inspiring real-life examples, this book shows that not only Singapore can realise its aim to be a medical research hub, but it has, in fact, also made major milestones in the annals of medical history."
